SUMMARY

Backend Software Engineer with 5 years of experience building distributed systems, event-driven microservices using Java, Spring Boot, and Apache Kafka. Proven record of owning features end-to-end from architecture through production at scale across fintech, e-commerce, and financial services domains.

EXPERIENCE

Intuit

October 2024 – Present

Software Engineer 2

Bengaluru, India

- Designed and deployed a Kafka-based asynchronous export pipeline using Spring Boot, decoupling report generation from request threads to eliminate timeouts; processed 34K+ export emails and handled 10%+ of peak traffic.
- Architected migration of browser-rendered report exports to an async, fault-tolerant backend PDF generation service backed by AWS S3, eliminating client-side rendering failures and enabling reliable delivery at scale.
- Built a generic template engine and config-driven data transformer in Java, enabling the Certified Payroll Report, to be delivered without code changes; extensible to onboard future report formats via configuration alone.
- Implemented gateway-level request isolation in the export service to prevent noisy-neighbor interference across requests, reducing export-related production incidents from ~1/month to zero.
- Drove end-to-end delivery of the large-report feature — spanning distributed system design, bug resolution, and production rollout — enabling 20K+ report views/month for previously unsupported dataset sizes.
- Participated in migrating 150+ standard report definitions and 35M+ custom reports from a legacy system to the Custom Report Builder framework, contributing to schema mapping and validation pipelines.
- Mentored 2 summer interns; led incident response, authored RCAs, and coordinated peak readiness.

Walmart Global Tech

September 2023 – October 2024

Software Engineer III

Bengaluru, India

- Built a runtime script-interception layer to monitor and govern third-party JavaScript within browser sessions, enforcing PCI DSS compliance controls across Walmart's consumer web applications.
- Engineered a network intelligence search platform consolidating data from multiple internal sources using Spring Boot and Apache Kafka, achieving sub-5s query latency and 24-hour data freshness.
- Implemented mTLS and IP-based allowlisting to secure a core Firewall-as-a-Service API endpoint, overcoming hardware device constraints that prevented header-based authentication to satisfy strict security compliance.
- Designed an event-driven cloud architecture using Azure Event Grid to intercept VM lifecycle events, enabling automated synchronization of newly provisioned compute IP addresses to downstream hardware firewalls.

Goldman Sachs

June 2021 – September 2023

Analyst

Bengaluru, India

- Engineered a scheduled batch processing pipeline parsing 600K customer records to identify 12K+ eligible Cash ISA renewals annually and trigger automated downstream servicing flows.
- Reduced agent handling time by 5 minutes per case by building an automated KYC identity verification workflow, eliminating redundant manual steps at scale.
- Migrated full-text search from a third-party dependency to a self-hosted Elasticsearch service, adding contextual relevance scoring, faceted filters, and fuzzy matching from scratch.
- Shipped core features for an internal Digital Assistant — group messaging, profile lookup, contextual search — adopted by 45K employees globally.

SKILLS

Languages: Java, Golang, TypeScript, JavaScript

Backend: Spring Boot, Microservices, REST APIs, Distributed Systems

Data & Infra: Apache Kafka, AWS (S3, EC2), Docker, Kubernetes, CI/CD (Jenkins), Splunk

Frontend: React, Angular

Working Knowledge: Elasticsearch, SQL, PostgreSQL

EDUCATION

S.G.S.I.T.S., Indore

2017 – 2021

Bachelor of Technology, Information Technology

Indore, India
